

CERTIFIED & QUALITY ASSURANCE SEED

Iowa Crop Improvement Association offers a seed certification program to assure varietal identity and purity. Seed classes in certification are described as follows:

BREEDER seed is directly controlled by the originating institution or firm who supplies the source for the initial and recurring increase of Foundation seed.

FOUNDATION seed shall be the progeny of Breeder or Foundation seed that is handled to maintain specific genetic identity and purity.

REGISTERED seed shall be the progeny of Foundation seed that is handled so it will meet the standards for Registered seed as approved by the certifying agency.

CERTIFIED seed shall be the progeny of Foundation or Registered seed that is handled so it will meet standards for Certified seed as approved by the certifying agency.

QUALITY ASSURANCE seed is an alternative for crop varieties or brands where a third party quality assurance is desired. The seed is a progeny of seed of known origin and identity.

The following pages list varieties and companies who requested field inspection of their varieties. To indicate the class of seed the columns are labeled with a REG for Registered seed, CER for Certified seed, and QA for Quality Assurance seed.

All seed sold as Registered, Certified, or QA class of seed must be bagged and must be labeled with a certification tag. Certified seed can also be sold under bulk retail sales and must be accompanied with a Bulk Retail Sale Certificate.

CORN

FOUNDATION

Foundation inbreds and single crosses were field inspected in 2009 for the following companies:

CRD Advisors
Monsanto-Iowa Foundation
Syngenta Seeds Inc

HYBRID

Hybrid corn was field inspected in 2009 for the following companies:

ConAgra Foods
Gro-Alliance
Middlekoop Seed Corn Inc
Monsanto
Mycogen Seeds
Pioneer Hi-Bred Int Inc
Remington Seeds, LLC
Syngenta Seeds Inc

CERTIFIED & QA SEED

CERTIFIED

The Sign of Good Seed

Seed Certification is a service for those who wish to produce high quality seed of known genetic purity. It is also an assurance to the consumers of seed that they are getting the varieties they desire.

In general use of seeds among farmers there is a strong tendency for them to become mixed. To be certain you get trueness to variety and a potentially high yield, buy certified seed every year.

Don't risk getting an unknown variety by purchasing uncertified seed.

OAT

BAKER

Baker was released by the Iowa State University Research Foundation. This variety has high yield and groat percentage. Baker is a mid-season oat, maturing at a date similar to Ogle, Jerry, and Blaze. It displays an erect growth habit in its tillers and flag leaf. Its panicles are mid-long, broad, and equilateral with drooping main branches. The seed are white, slender, and fluorescent. Baker's disease resistance is similar to other current spring oat varieties.

COLT

Colt was released by the South Dakota Agricultural Experiment Station. It is a white-hulled spring oat. Compared to Don it has superior grain yield, test weight, protein percentage, crown rust resistance, and lodging resistance. Colt is a short to medium oat with very early maturity. It is a multi-purpose variety that may be used for companion crop, multi-cropping, and/or harvesting for grain. Plant variety protection is pending.

DON

Don was released by the Illinois Agricultural Experiment Station and USDA-ARS. Don is an early-maturing variety. The kernels are dull white in color, medium to large, and midplump. The kernels are predominantly fluorescent, but may contain up to 0.2% of nonfluorescent variants. It has short straw, but is moderately susceptible to lodging. Don has excellent resistance to crown rust and smut. It is susceptible to stem rust and moderately tolerant to barley yellow dwarf virus. Don may also contain up to 0.1% taller, later plants.

ESKER

Esker was released by the Wisconsin Alumni Research Foundation. It is a mid-season oat which has had consistently high grain yields. Test weights are similar to those of Gem, while heading date is about 1 day later than Moraine, and just slightly earlier than Ogle. Esker is a medium height variety with infrequent awns and yellow lemma. Kernels are nonfluorescent. Barley yellow dwarf tolerance is comparable to that of Ogle. Crown rust resistance is good. Recognized classes of certified seed are Foundation and Certified. Esker is a PVPA protected variety.

EXCEL

Excel is a spring oat variety that was developed cooperatively by the Purdue University Agriculture Research Programs and the USDA-ARS. It was released for its wide adaptation, high grain yield, and tolerance to yellow dwarf virus. Excel is moderately early, medium tall variety with strong straw. It has light tan hulls that do not fluoresce in UV light. It is awnless with a awnlets on a few florets. Variants of up to 0.5% are allowed.

INO9201

INO9201 is a short spring oat released by Purdue University Agricultural Research Programs and the USDA-ARS. This variety is licensed through Ag Alumni Seed Improvement Association, Inc. INO9201 has dark green foliage with equilateral panicles. The glumes and lemma are yellow at maturity. Awns are infrequent, nontwisted, and up to 17 mm long. Glumes are nonfluorescent. INO9201 has high yield potential, is early in maturity, and is resistant to lodging. INO9201 has resistance to barley yellow dwarf virus and crown rust. INO9201 is a PVPA protected variety.

JAY **PVP**

Jay was released by the Purdue University Agricultural Research Programs and the USDA-ARS. The glumes and lemma are light tan at maturity. Awns are infrequent, nontwisted, and up to 5/8 inches long. Glumes are fluorescent with up to 0.4% nonfluorescent kernels present. Jay is resistant to crown rust and has improved resistance to barley yellow dwarf virus. Jay is a PVPA Title V protected variety.

JERRY **PVP**

Jerry was developed by the North Dakota Agricultural Experiment Station and released in 1994. Jerry has white hulls with fluorescent lemmas. Kernels have high test weight, groat percent, and whole oat protein. Jerry has medium high protein. This variety is moderately susceptible to barley yellow dwarf and crown rust. Jerry is moderately resistant to stem rust. Jerry is a PVPA protected variety.

REEVES

Reeves was developed by South Dakota Agricultural Experiment Station. Reeves is similar in maturity to Don and is approximately five inches taller with improved crown rust resistance, test weight, and protein percent. Reeves is similar to Don in barley yellow dwarf virus and lodging resistance. This variety has a very good test weight, early maturity, and medium straw strength for a tall variety. Reeves is rated moderately resistant for crown rust, barley yellow dwarf virus, and smut. It is susceptible to stem rust. Kernels are medium-high in protein and high in oil percentage.

CERTIFIED & QA SEED

ROBUST

Robust is a moderately early maturing oat released by Purdue University Agricultural Research Programs and the USDA-ARS. This variety is licensed through Ag Alumni Seed Improvement Association, Inc. Robust has a high test weight and yield. It is resistant to lodging, crown rust, and yellow dwarf viruses. It is moderately resistant to loose smut and is susceptible to stem rust. Lemmas of Robust are very light tan, considered white, and fluoresce. It is awnless, although an occasional lemma has a small awnlet. Up to 0.5% variants are allowed.

SOURIS

Souris was released by North Dakota State University Agricultural Experiment Station and is licensed by Dakota Select Seeds. It consistently produced high yields and test weights in testing in North Dakota. Souris has an excellent source of resistance to prevalent races of crown rust. This midtall variety is late in maturity with infrequent awns. The plump kernels are fluorescent and the lemma is white. Up to 1% taller plants may be noted. Souris is a PVPA protected variety.

Dickinson	Sterler Seed Farm			35

TACK

Tack is a spring oat variety released by the Illinois Agricultural Experiment Station. It is a tan-seeded variety combining very good yield potential with exceptionally high test weight and good barley yellow dwarf virus tolerance and crown rust resistance. Tack is one to three days earlier, similar in height, and averaged 10 bushels per acre higher yield than Ogle. It is a short, midseason with infrequent awns. Recognized classes of certified seed are Foundation and Certified. Tack is a PVPA Title V protected variety. Variants of up to 0.5% off-type plants and 0.5% nonfluorescent seed are allowed

SOYBEAN

IA1008LF

IA1008LF is a Group I maturity variety released by the Iowa State University Research Foundation. It is a large-seeded, high protein variety for use in food production. IA1008LF is a triple-null line which lacks all three lipoxygenase enzymes and thus does not contain the beany flavor when compared to conventional cultivars. It has purple flowers, gray pubescence, tan pods, and dull yellow seed with yellow hila.
