

Dr. Mark E. Westgate is Professor of Crop Production and Physiology in the Department of Agronomy at Iowa State University. Dr. Westgate is recognized internationally as an authority on corn and soybean reproductive development. His research program centers on understanding the physiological mechanisms controlling the response of seed formation and development of major agricultural crops to environmental stresses. He has conducted collaborative research in Europe, Australia, and Sub-Saharan Africa. Dr. Westgate is a Fellow of the American Society of Agronomy, Fellow of the Crop Science Society of America, and Science Fellow of the Australian National University, and current President of the Crop Science Society of America.
